We're Building Community

CARBON COALITION

The Carbon Coalition are citizens, scientists, businesses, students, communities and organizations who have come together to advocate for a national energy policy that protects our communities and environment from the ravages of global warming caused by carbon pollution. Global warming is fast becoming a moral, economic and national security issue.

Are you interested in a grassroots effort, looking into energy conservation issues and reducing energy consumption? We can begin to work locally in a collective effort to pursue state and federal and federal policy makers toward conservation and alternative energy uses.

Locally there is an effort for a petition to go to the President and Congress to address the issue of climate change which is increasingly harmful to the environment and economy of NH. There will be a petition in front of Fremont voters at Town Meeting to pledge Fremont's support of such efforts. It urges actions federally to include establishing a national program requiring reductions of US greenhouse gas emissions while protecting the US economy and creating a major national research initiative to foster rapid development of sustainable energy technologies, stimulating new jobs and investment.

Our efforts can make a difference. Contact Bob Larson at 895 4013 if you would like to be part of such an effort being undertaken in Fremont. A study committee of interested residents will be formed.
